PORTICO E-BOOK PRESERVATION: PROGRESS MADE, LESSONS LEARNED, AND FUTURE DIRECTIONS

CRL webinar

PORTICO

AGENDA

- Overview of Portico's services
- E-Book preservation progress and new developments
- Preserving and delivering e-books
- Future Possibilities

PORTICO

PORTICO

BEYOND SERIALS—LESSONS LEARNED AND FUTURE DIRECTIONS FOR E-BOOK PRESERVATION

I T H A K A

ITHAKA is a not-for-profit organization that helps the academic community use digital technologies to preserve the scholarly record and to advance research and teaching in sustainable ways.

ARTSTOR

Artstor provides 2+ million high-quality images and digital asset management software to enhance scholarship and teaching.

Ithaka S+R is a not-for-profit research and consulting service that helps academic, cultural, and publishing communities thrive in the digital environment.

JSTOR is a not-for-profit digital library of academic journals, books, and primary sources.

PORTICO

Portico is a not-for-profit preservation service for digital publications, including electronic journals, books, and historical collections.

E-Book Preservation

669,430 e-books preserved today

4 e-reference books preserved today

98,354 e-reference entries preserved today

131 e-book publishers committed today

404 e-books fulfilling PCA claims

1 e-book (e-reference) triggered

Received E-Book Formats

- ONIX + PDF (lots of it)
- JATS, BITS, or proprietary headers + full book PDF
- JATS, BITS, or proprietary headers + chapter level PDFs
- JATS, BITS, or proprietary full-text XML+ full book PDF
- JATS, BITS, or proprietary full-text XML+ chapter level PDFs

Note: e-book packaging can be quite complex and, as all the librarians in the room will no doubt attest, the bibliographic metadata is frequently not as robust as we would like.

RECENT DEVELOPMENTS

More complex products

- reference databases
- digital products based on print volumes

With more than just metadata + PDF or a self-contained format

- additional mapping
- complex relationships
- updates

Requires decisions regarding content type and business models

PRESERVING E-BOOKS

Portico defines fully managed digital preservation as the series of policies and activities necessary to ensure the usability, authenticity, discoverability, and accessibility of content over the very long-term.

- Format based migration strategy
- Preservation metadata
- Practical preservation
- Archive is self-describing
- Dark archive with audit access

Files Arrive

Files Are Processed

substance: boron nitride (BN)**property: structure**

Structure, mechanical, and thermal properties, phase diagrams, electrical transport properties, electronic band structure, optical, luminescence, Raman, and infrared spectroscopy, defect and alloy properties are reviewed in [94E].

Boron nitride crystallizes in three modifications: BN_{hex} (hexagonal BN), BN_{cub} (cubic BN, zincblende structure), and BN_w (wurtzite structure). BN_{hex} is stable under normal conditions, BN_{cub} is metastable under normal conditions. The BN_w phase is metastable under all conditions.

No change of phase has been observed at temperatures between 4 and 1433 K [75S]. The growth of cubic BN films requires high substrate temperatures [97J]. For the stress and strain of cubic BN films as a function of the substrate temperature between 700 and 1200 °C, see [98Z].

Under pressure, hexagonal BN can be transformed into the zincblende form between 2500 and 4000 K and to the wurtzite structure at lower temperature [63B, 72W]. The transition from hexagonal to wurtzite-structure BN occurs at 10.4 GPa (298 K), 9.8 GPa (597 K), 8.5 GPa (873 K) [86W]. From OLCAO calculations, the hexagonal phases are more stable than the close-packed modifications by 350 meV/atom [91X], while from ab-initio pseudopotential calculations the denser modifications are much more stable by 60 meV/atom [94F]; the zincblende phase is calculated to have a lower energy than the wurtzite phase by 75 [91Y], 27 [86W], 20 [94E]

FUTURE POSSIBILITIES

Expand standard preservation services to accommodate less traditional e-books

Explore the need to move beyond scholarly markets (e.g. trade)

Develop preservation models for digital scholarship, dynamic content, and other nonserial formats

Preservation community “collection policy” to make sure there are no significant gaps
